### Hannin Creek Education and Applied Research Centre (HCEARC)

Ecologically speaking, we know that habitat is key for healthy populations. HCEARC provides a habitat for environmental education and understanding.

### The Three Birds

We will be addressing every SDG with the production of 17 books. One for every SDG.

### Saskatchewan Ecomuseums Initiative (SEI) - 2016

The SEI was initiated in 2011 to explore the potential for ecomuseums in Saskatchewan.

### Nature City Festival, Saskatoon

The Nature City Festival is one week, at the end of May, in which over 70 organizations profile the city of Saskatoon and the biodiversity of species, cultures, and art within the city.

### RCE K-12 Education Website ([www.rceed.ca](http://www.rceed.ca))

Sustainability Education provides the platform to allow our students to create, innovate, and lead activities that make a meaningful impact in our communities.

## Hannin Creek Education and Applied Research Centre (HCEARC)

Contributing organization(s) :  
Saskatchewan Polytechnic and Saskatchewan Wildlife Federation

**Rationale:**  
We define sustainability as 'the management of our resources in a manner which does not deplete their availability for future generations'. The HCEARC is located on a watershed in a remote area of the mid-boreal forest ecosystem of central Saskatchewan, surrounded by a Provincial Game Preserve with an abundance of natural forests, wildlife, birds and fish. For over 40 years, students have participated in hands-on applied learning in sampling, data collection, testing and analysis, laboratory and field experiences, simulated investigations, wilderness survival, and applied research.

## Rationale:

We define sustainability as 'the management of our resources in a manner which does not deplete their availability for future generations'. The HCEARC is located on a watershed in a remote area of the mid-boreal forest ecosystem of central Saskatchewan, surrounded by a Provincial Game Preserve with an abundance of natural forests, wildlife, birds and fish. For over 40 years, students have participated in hands-on applied learning in sampling, data collection, testing and analysis, laboratory and field experiences, simulated investigations, wilderness survival, and applied research.

## Objectives:

We hope researchers, graduates and conservationists from all cultures benefit from the facility to contribute a body of knowledge on world sustainability issues, including climate change, water resources and environmental management. The facility's unique role as the only boreal forest field station in Saskatchewan means that it is well-positioned to support vital research on sustainability in a vulnerable region and society.

## Saskatchewan Ecomuseums Initiative (SEI) - 2016

### Contributing organization(s):

Royal Saskatchewan Museum (Saskatchewan Ministry of Parks, Culture and Sport)

### Description:

The SEI was initiated in 2011 to explore the potential for ecomuseums in Saskatchewan. Given that interest in the ecomuseum concept appears to be high, and the number of communities that want to work with the model continues to increase, this provincial project has become a central focus of the Human Ecology curatorial program at the Royal Saskatchewan Museum. In 2016 the "Newly-Forming Ecomuseums Development Framework" was released (see attached reference materials) and in the Fall of 2016 the...
